PROFILE

Backend-focused Software Developer with strong foundations in **Object-Oriented Programming, RESTful APIs, and database-driven application development**. Hands-on experience developing backend applications using **Java and JavaScript (Node.js)** through academic and personal projects. Skilled in **debugging, unit testing, and SDLC practices**, with an interest in building reliable and scalable software systems.

SKILLS

- Programming Languages: Java, JavaScript (Node.js)
- Backend & Web Technologies: REST APIs, HTTP, Express.js, Object-oriented Programming (OOP), Linux
- Databases: MongoDB (CRUD, Schema design), MySQL
- Software Development Concepts: Software Development Lifecycle (SDLC), Debugging, Code Quality
- Cloud Technologies: AWS (EC2, basic cloud deployment), CI/CD fundamentals (GitHub workflow)
- Testing: Functional Test Planning, Unit Testing (JUnit), Bug Tracking
- Tools: Git, GitHub, GitHub Copilot, Postman, Maven, Gradle, Agile, Code Reviews
- Soft Skills: Problem Solving, Team Collaboration, Communication, Continuous Learning

PROJECTS

Invoice Pro – Smart Invoice Management Web App:

Tech Stack: React, JavaScript, CSS, MongoDB, Express, Node.js

- Designed and developed a **full-stack invoice management system** using MERN stack to automate invoice generation and tracking.
- Implemented **RESTful APIs** for secure user authentication and invoice operations.
- Built features for **invoice creation, preview, search functionality, and PDF generation** improving usability and workflow efficiency.
- Implemented **invoice search and filtering** to optimize data retrieval and application performance.
- Designed a **responsive dashboard UI** and deployed the application using cloud hosting and MongoDB Atlas.
- Applied **backend validation, debugging, and structured API design** to improve application reliability.
  Live Demo: https://invoicemern.netlify.app/
  GitHub: https://github.com/Sohil75/InvoicePro

User Info Manager:

Tools Used: Java, Java Swing, SQLite

- Designed and developed a **full-stack invoice management system** using MERN stack to automate invoice generation and tracking.
- Implemented **RESTful APIs** for secure user authentication and invoice operations.
- Built features for **invoice creation, preview, search functionality, and PDF generation** improving usability and workflow efficiency.
- Implemented **invoice search and filtering** to optimize data retrieval and application performance.
- Designed a **responsive dashboard UI** and deployed the application using cloud hosting and MongoDB Atlas.
- Applied **backend validation, debugging, and structured API design** to improve application reliability.

EDUCATION

Bachelor of Technology (Computer Science & Engineering)
Presidency University, Bengaluru.
Passing Year: 2024 | GPA: 7.45 / 10

CERTIFICATION & COURSES

- **Generative AI –** Simplilearn | March 2026 |Credential URL
- **Full-Stack Development –** UpGrad | Sept 2024 |Credential URL
- **SQL** – UpGrad **|** April 2025 |Credential URL
